

`\moveleft` $\langle dimen \rangle$ $\langle box \rangle$

`\moveright` $\langle dimen \rangle$ $\langle box \rangle$

These commands move $\langle box \rangle$ left or right by $\langle dimen \rangle$ (which can be negative). You can only apply `\moveleft` and `\moveright` to a box that's in a vertical list.

Example:

```
\vbox{\vbox{Phoebe}\vbox{walked}}%
\moveleft 20pt\vbox{a}\moveright 20pt\vbox{crooked}%
\vbox{mile.}}
```

produces:

Phoebe
walked

a

crooked
mile.
