

`\mskip` $\langle mudimen_1 \rangle$ **plus** $\langle mudimen_2 \rangle$ **minus** $\langle mudimen_3 \rangle$

This command produces horizontal glue that has natural width $\langle mudimen_1 \rangle$, stretch $\langle mudimen_2 \rangle$, and shrink $\langle mudimen_3 \rangle$. The glue is measured in mathematical units, which vary according to the style. Aside from its units of measurement, this command behaves just like `\hskip` (p. ‘`\hskip`’).

Example:

`$0\mskip 13mu 0 \quad {\scriptscriptstyle 0 \mskip 13mu 0}$`

produces:

0 0 o o
