

`\everypar` [ *(token list)* parameter ]

T<sub>E</sub>X performs the commands in *(token list)* whenever it enters horizontal mode, e.g., when it starts a paragraph. By default `\everypar` is empty, but you can take extra actions at the start of every paragraph by putting the commands for those actions into a token list and assigning that token list to `\everypar`.

*Example:*

```
\everypar = {$\Longrightarrow$\enspace}
```

```
Now pay attention!\par
```

```
I said, ‘‘Pay attention!’’.\par
```

```
I’ll say it again! Pay attention!
```

*produces:*

⇒ Now pay attention!

⇒ I said, “Pay attention!”.

⇒ I’ll say it again! Pay attention!
