

`\mathcode` $\langle charcode \rangle$ [$\langle number \rangle$ table entry]

This table entry contains the mathcode of the character whose ASCII code is $\langle charcode \rangle$ (see “mathcode”, p. ‘mathcode’). The mathcode specifies that character’s interpretation in math mode.

Example:

```
\mathcode\> = "313E % as in plain TeX
% The > character has class 3 (relation), family 1 (math
% italic), and character code "3E
```
