

1

☞ `\line` *<argument>*

This command produces an hbox containing *<argument>*. The hbox is exactly as wide as the current line, i.e., it extends from the right margin to the left margin.

*Example:*

```
\line{ugly \hfil suburban \hfil sprawl}
```

```
% Without \hfil you'd get an 'underfull box' from this.
```

*produces:*

```
ugly                suburban                sprawl
```
