

`\dotfill`
`\hrulefill`

These commands respectively fill the enclosing horizontal space with a row of dots on the baseline and with a horizontal line on the baseline. It's usually a good idea to leave a space between `\dotfill` or `\hrulefill` and any text that precedes or follows it (see the example below).

Example:

```
\hbox to 3in{Start {\dotfill} Finish}
\hbox to 3in{Swedish {\hrulefill} Finnish}
```

produces:

```
Start ..... Finish
Swedish _____ Finnish
```
