

`\fmtname`
`\fmtversion`

These commands produce the name and version number of the T_EX format, e.g., plain T_EX or L^AT_EX, that you're using. The `\fmtversion` string contains a long list of supported languages, so is omitted here.

Example:

This book was produced with the `\fmtname\` format.

produces:

This book was produced with the eplain format.
