

`\lgroup`

`\rgroup`

These commands produce large left and right parentheses that are defined as opening and closing delimiters. The smallest available size for these delimiters is `\Big`. If you use smaller sizes, you'll get weird characters.

Example:

`$$\lgroup\dots\rgroup\qquad\bigg\lgroup\dots\bigg\rgroup$$`

produces:

$$(\dots) \qquad \left(\dots \right)$$
