

☞ `\beginsection` *⟨argument⟩* `\par`

You can use this command to begin a major subdivision of your document. *⟨argument⟩* is intended to serve as a section title. `\beginsection` surrounds *⟨argument⟩* by extra vertical space and sets it in boldface, left-justified. You can produce the `\par` that ends *⟨argument⟩* with a blank line.

*Example:*

```
$\ldots$ till she had brought herself down to nine
inches high.
```

```
\beginsection Section 6. Pig and Pepper
```

```
For a minute or two she stood looking at the house $\ldots$
produces:
```

```
... till she had brought herself down to nine inches high.
```

## **Section 6. Pig and Pepper**

```
For a minute or two she stood looking at the house ...
```
