

`\wlog {token list}`

This command writes *token list* on the log file. T<sub>E</sub>X expands *token list* according to the same rules that it uses for `\edef` (p. ‘`\edef`’).

*Example:*

```
\wlog{Take two aspirins and call me in the morning.}
```

*produces in the log:*

```
Take two aspirins and call me in the morning.
```
