

```
\pagestretch    [ <dimen> parameter ]  
\pagefilstretch  [ <dimen> parameter ]  
\pagefillstretch [ <dimen> parameter ]  
\pagefilllstretch [ <dimen> parameter ]
```

These four parameters together specify the amount of stretch in the glue on the current page. The amount of stretch has the form  $n_0 + n_1\text{fil} + n_2\text{fill} + n_3\text{filll}$ , with the four parameters giving the values of the four  $n_i$ . T<sub>E</sub>X updates these parameters as it adds items to the main vertical list.
