

\!  
 \,  
 \>  
 \;

These commands produce various amounts of extra space in formulas. They are defined in terms of mathematical units, so T<sub>E</sub>X adjusts the amount of space according to the current style.

- \! produces a negative thin space, i.e., it reduces the space between its neighboring subformulas by the amount of a thin space.
- \, produces a thin space.
- \> produces a medium space.
- \; produces a thick space.

*Example:*

```

$$\scriptstyle 00\quad 0\!0\quad 0\,,0\quad 0\!>0\quad 0\;;0\quad$$

```

*produces:*

00 00 00 00 00 00 00 00 00 00
