

`\displayindent` [*<dimen>* parameter]

This parameter specifies the space by which T_EX indents a math display. T_EX sets the value of `\displayindent` when it encounters the ‘`$$`’ that starts the display. Usually this initial value is zero, but if the paragraph shape indicates that the display should be shifted by an amount *s*, T_EX will set `\displayindent` to *s*. See pages 188–189 of *The T_EXbook* for a more detailed explanation of this parameter.
