muglue 1

muglue. Muglue is a kind of glue that you can use only in math formulas. It is measured in mu (mathematical units). One mu is equal to $^1/_{18}$ em, where the size of an em is taken from family 2 of the math fonts. TeX automatically adjusts the size of muglue according to the context. For instance, a glue size of 2mu is normally smaller within a subscript than it is within ordinary text. You must use the \mskip command to produce muglue. For example, '\mskip 4mu plus 5mu' produces mathematical glue with natural space of four mu and stretch of five mu.
