1

 $\begin{tabular}{llll} $$ \mbox{\colored} & $ & [ \langle glue \rangle \mbox{\colored} & [ \rangle \mbox{\colored}$ 

These parameters specify the amounts of glue produced by the \small-skip, \medskip, and \bigskip commands. By changing these parameters you change the effect of the commands. The default values (for plain TeX) correspond to a quarter of a linespace, half a linespace, and a full linespace. We recommend that you maintain this ratio by changing these values whenever you change \baselineskip (p. '\baselineskip').
