1

\dotfill \hrulefill

These commands respectively fill the enclosing horizontal space with a row of dots on the baseline and with a horizontal line on the baseline. It's usually a good idea to leave a space between \dotfill or \hrulefill and any text that precedes or follows it (see the example below).

Example:

\hbox to 3in{Start {\dotfill} Finish}
\hbox to 3in{Swedish {\hrulefill} Finnish}
produces:
Start Finish
Swedish ______ Finnish
