1

```
\arrowvert
\Arrowvert
\lmoustache
\rmoustache
\bracevert
```

These commands produce portions of certain large delimiters and can themselves be used as delimiters. They refer to characters in the `cmex10` math font.

Example:
```
  $$\cdots \Big\arrowvert \cdots \Big\Arrowvert \cdots
    \Big\lmoustache \cdots \Big\rmoustache \cdots
    \Big\bracevert \cdots$$
```
produces:

$$\cdots \Big| \cdots \Big\| \cdots \int \cdots \Big\} \cdots \Big| \cdots$$
