1

\hfuzz   [⟨*dimen*⟩ parameter]
\vfuzz   [⟨*dimen*⟩ parameter]

These parameters specify the amount that a box can exceed its natural size before TEX considers it to be overfull. \hfuzz applies to hboxes and \vfuzz applies to vboxes. Plain TEX sets both parameters to 0.1pt.

Example:

```
  \hfuzz = .5in
  \hbox to 2in{This box is longer than two inches.}
  % No error results
```

produces:

This box is longer than two inches.
