1

\buildrel ⟨*formula*⟩ \over ⟨*relation*⟩
secondprinting

This command produces a box in which ⟨*formula*⟩ is placed on top of ⟨*relation*⟩. TeX treats the result as a relation for spacing purposes (see "class", p. '`class`').

Example:

```
$\buildrel \rm def \over \equiv$
```

produces:

$\buildrel \rm def \over \equiv$
